

# CHARGE

# **Build Notes**

#### **Frame Insert**

Clip the frame insert (WC000068) into mainframe cable port.

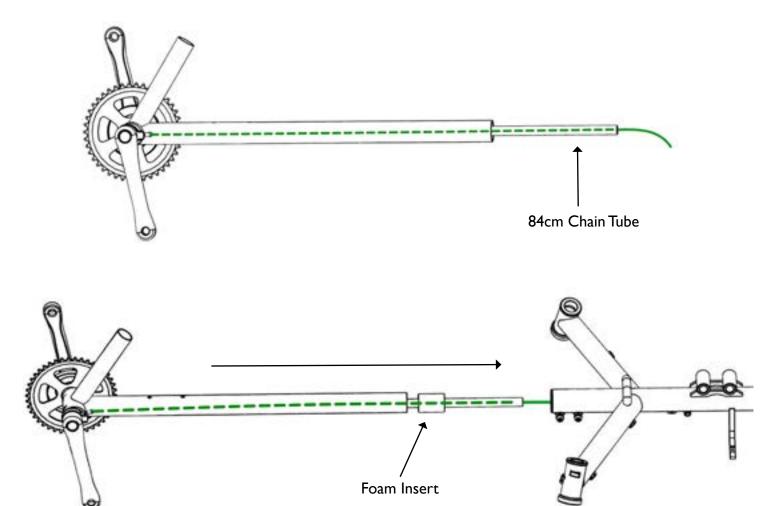

#### **Internal Cable Routing - Cadence Sensor**

Cadence sensor cable (green, 5 pin) is pre-installed on the bottom bracket and internally routed through the boom. During assembly, insert the cadence cable through the non-flared 84cm chain tube included in the kit.

Install the foam insert around the chain tube and secure chain tube in boom. Once the chain tube has been secured, install boom into mainframe. Continue routing cadence cable through the mainframe and out of the cable port near the chainstays.

Tech Tip: Use internal cable routing kit or spare shift cable to assist with internal routing. Insert the guide cable through the cable port on the underside of the mainframe near the chainstays. Route the guide cable through the frame and out of the boom receiver tube. Locate the cadence sensor cable and tape it to the guide cable. Pull guide cable from cable port while inserting the boom into the frame.

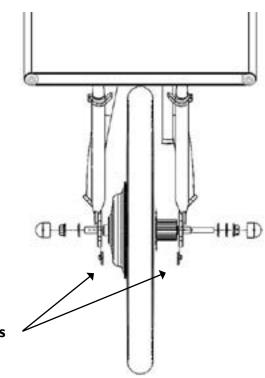

www.TerraTrike.com | 800.945.9910

#### **Promovec Cable Routing**

Install rear wheel prior to derailleur or securing Promovec cables.

Anti-rotation washers are to be installed on the inside of the dropouts.

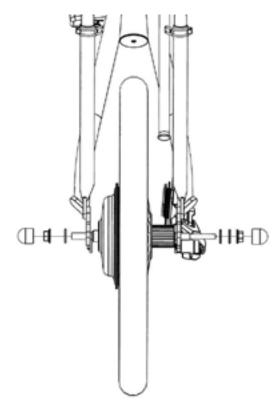

Install the washers on the axles so the tabs fit in the dropouts, and slide the wheel into place.

**Anti-rotation washers** 

Note: Two washers are to be installed on drive side of axle, one washer on non-drive side.

Tighten axle nuts to 25-28Nm and install dust caps.

Promovec Cable Routing shown below. Excess cables will be maintained by cable cover. Make sure the arrows on the cable plugs are aligned before connecting.

Cadence Cable - 5 pin - dashed line = internal routing

Extra Light Cable (6v) - 5 pin - Note: Can be used to install aftermarket light.

Computer Cable - 6 pin

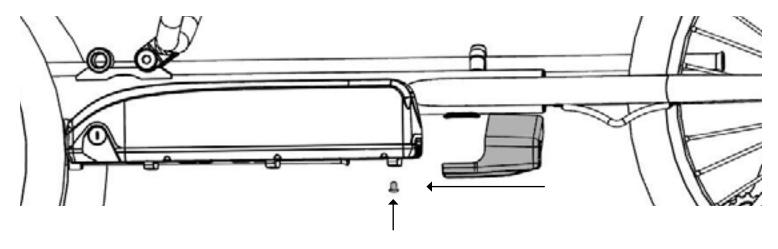

Motor Cable - 9 pin

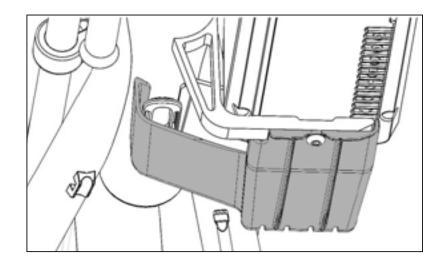

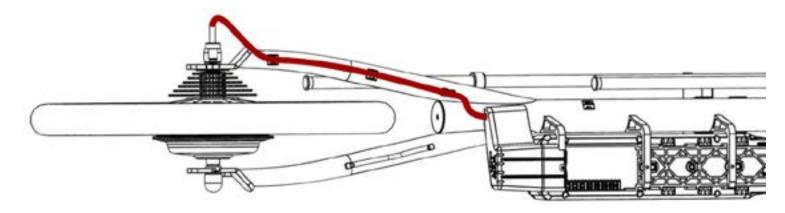

# TerraTrike

#### **Cable Cover Installation**

Slide cable cover onto the frame insert to protect the internally routed cables. Route the rear wheel motor cable through the cover as shown in the last image below. Secure any excess cable(s) inside of the cable cover. Use M5x8 bolt to secure the cable cover to the battery mount.

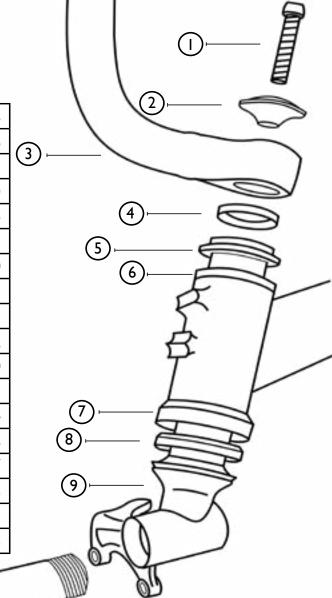

#### **Hybrid Steering Stack Assembly\***

Assemble the steering stack as shown. Grease the steerer tube before inserting into head tube. Remove any excess grease from steerer tube before installing handlebar. Grease axle before installing wheel. Torque axle to 23-25Nm.

\*Right Hand assembly depicted. Some components can be purchased individually as well as in pairs, see parts list below.

# **Hybrid Steering Stack Assembly Continued\***

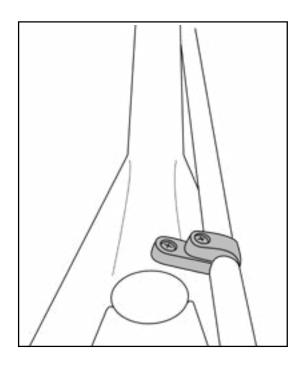

Install Axle Spacer (11) between brake rotor and hub.

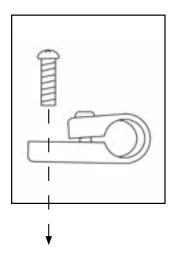

# **Chain Tube Setup**

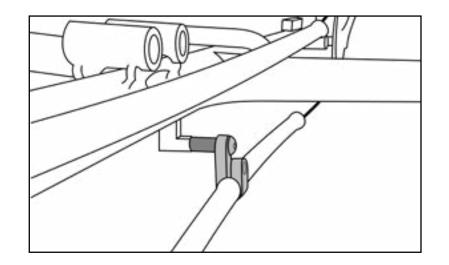

Mount the chain tube assemblies as shown below. Ensure the chain tubes do not rotate in the clamps after tightening the pinch bolts.

#### **Display Assembly**

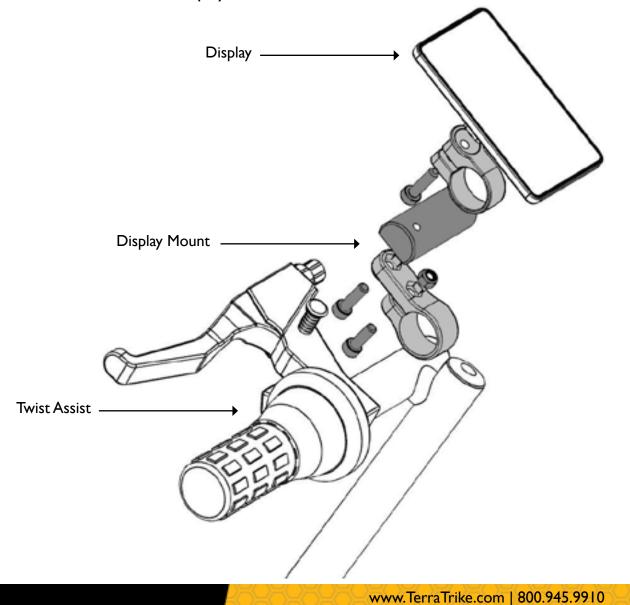

Wheel size setting is preset to 62.5. During assembly, double check the setting is correct. If an adjustment is needed, refer to page 6 of the <a href="Promovec Display Manual">Promovec Display Manual</a>.

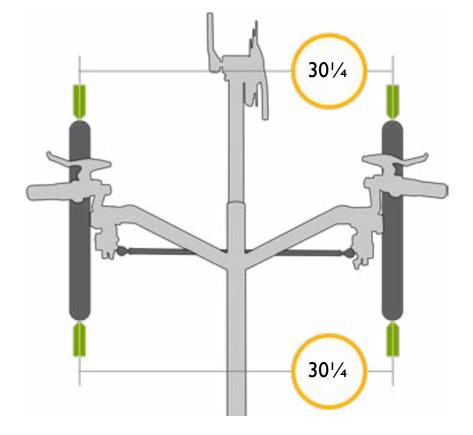

Please note: The Promovec Twist Assist does not offer continuous motor output. When the Twist Assist is engaged, the Level I-5 assist function is bypassed and the 'Boost Effect' is activated. This effect offers a limited burst of additional power. Refer to the <a href="Promovec Display Manual">Promovec Display Manual</a> for more information.

Assemble the display mount as shown.

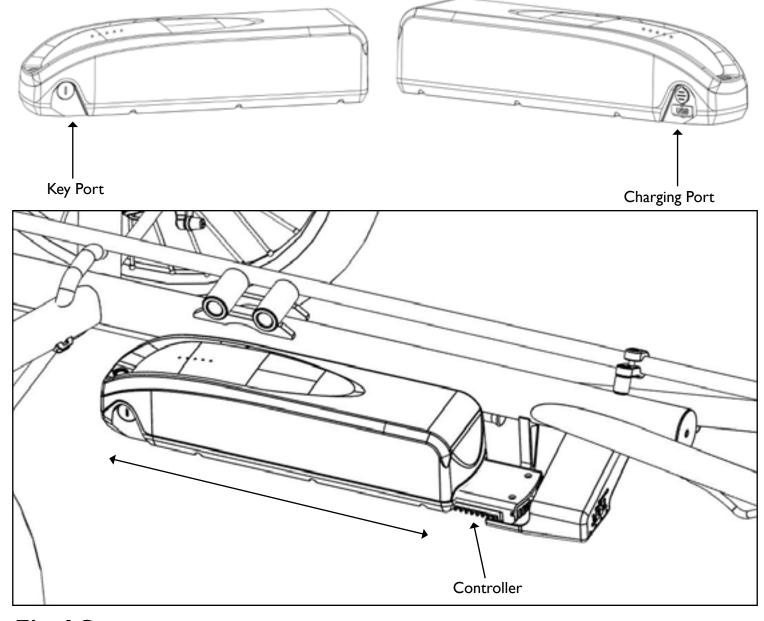

#### **Alignment**

Inflate tires before performing alignment. The Charge alignment measurement is approximately 30½" (center tread to center tread), though slight variance is possible. Most importantly, make sure the alignment remains neutral with a rider seated in the trike.

#### **Battery**

Charging port and USB port are opposite the key port. Battery can be charged on or off the trike. To remove battery, unlock the key port and slide battery toward front of trike. To reinstall battery, align battery on controller and slide battery toward rear of trike. Ensure battery clicks in place and key port is locked once installed. LED lights on top of battery display charge level.

#### **Final Steps:**

- Charge the battery pack completely.
- Test ride the finished product.

Visit the TerraTrike Website for additional user manuals.
